Shoes included according to size
and functionality

All screws are included except for
ground anchor screws.

Weight approx: 33kg. /38kg. /
43kg.

Module [1panel+2posts]

Type A-Calza for center post/ends

Type B-Calza for
corners/intersections

Assembly recommendations:

All three modules are also offered in vv100x30

(In this case, the number of profiles placed horizontally increases.)

Standard modules can be ordered in different sizes.

-A wider section of 150 cm. could combine and the structure would lose clamping force.

It is advisable to use this item as an enclosure, not as a fence, due to the expansions of the plastic.

Do not use for very long projects due to the characteristics of the structure.

-Type A socks are for central and extreme posts.

-Type B socks for corners.

JAÉN ENCLOSURE

100x120 cm

121x140 cm

142x180 cm

Zinc-plated or galvanized fasteners

Weight approx: 43kg

Section [1panel+1post]

Enclosure

TOLEDO ENCLOSURE

1500x1000 mm - Weight approx.: 38 kg

Zinc-plated or galvanized fasteners

DESIGN

Timeless or contemporary style elements that combine a perfect global vision for any environment.

QUALITY

Products manufactured under quality standards to ensure their durability and functionality in adverse conditions. With a long service life and totally respectful with the environment.

INTEGRATION

Our profile is created to integrate into the environment and to form harmonious urban surfaces. It also combines with any element of another material, color or texture.

This profile adapts perfectly to any pre-existing support, allowing savings in material (hardware, legs, screws, structures, etc).

It can be used for a construction of new furniture or as a replacement for deteriorated parts.

Burying this plastic, throwing it away or hiding it does not solve the problem, it makes it worse.

The damage to the environment is very high, this industrial material takes up to 400 years to degrade. At Abadecom we are committed to sustainable innovation, reusing the large amount of urban, industrial or domestic plastic waste that is generated. With the reuse of plastics, these profiles are created with an innumerable versatility of use, from fences and enclosures, to poles, urban furniture, beach walkways, planters, benches, information panels and an endless number of finished products that bring a new end to the plastic material in the "Zero Level" of use (Material that has fulfilled its useful life cycle)
